MAXIM

SOT Temperature Sensors with Period/Frequency Output
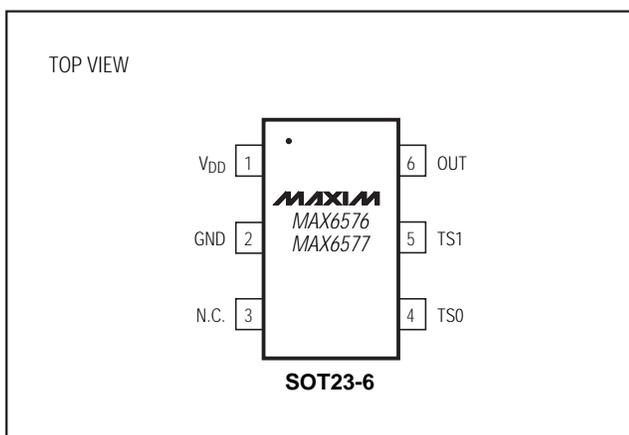

General Description

The MAX6576/MAX6577 are low-cost, low-current temperature sensors with a single-wire output. The MAX6576 converts the ambient temperature into a square wave with a period proportional to absolute temperature (°K). The MAX6577 converts the ambient temperature into a square wave with a frequency proportional to absolute temperature. The MAX6576 offers accuracy of ±3°C at +25°C, ±4.5°C at +85°C, and ±5°C at +125°C. The MAX6577 offers accuracy of ±3°C at +25°C, ±3.5°C at +85°C, and ±4.5°C at +125°C.

Both devices feature a single-wire output that minimizes the number of pins necessary to interface with a microprocessor. The period/frequency range of the output square wave can be selected by hard-wiring the two time-select pins (TS0, TS1) to either V_{DD} or GND. The MAX6576/MAX6577 are available in space-saving 6-pin SOT23 packages.

Features

♦ **Simple Single-Wire Output**

♦ **Two Output Types Available**
   Temperature to Period (µs) (MAX6576)
   Temperature to Frequency (Hz) (MAX6577)

♦ **±0.8°C Accuracy at +25°C (±3°C max)**

♦ **No External Components**

♦ **Operates from +2.7V to +5.5V Supply Voltage**

♦ **Low 140µA Typical Supply Current**

♦ **Standard Operating Temperature Range: -40°C to +125°C**

♦ **Small 6-Pin SOT23 Package**

Applications

Critical µP and µC Temperature Monitoring

Portable Battery-Powered Equipment

Cell Phones

Battery Packs

Hard Drives/Tape Drives

Networking and Telecom Equipment

Medical Equipment

Automotive

Ordering Information

PART	TEMP. RANGE	PIN-PACKAGE	SOT TOP MARK

SOT Temperature Sensors with Period/Frequency Output

ABSOLUTE MAXIMUM RATINGS

Terminal Voltage (with respect to GND)
V_{DD} ....-0.3V to +6V
TS1, TS0, OUT......................................-0.3V to (V_{DD} + 0.3V)
Input/Output Current, All Pins...±20mA
Continuous Power Dissipation (T_A = +70°C)
6-pin SOT23 (derate 7.10mW/°C above +70°C).........571mW

Operating Temperature Range ....-40°C to +125°C
Storage Temperature Range.. ....-65°C to +150°C
Lead Temperature (soldering, 10sec) ....+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{DD} = +2.7V to +5.5V, T_A = -40°C to +125°C, unless otherwise noted. Typical values are specified at T_A = +25°C and V_{DD} = +5V, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS
V_{DD} Range	V_{DD}			2.7		5.5	V

SOT Temperature Sensors with Period/Frequency Output

PIN	NAME	FUNCTION
1	V$_{DD}$	Positive Supply Voltage
2	GND	Ground
3	N.C.	No Connection. Connect pin to GND or leave open.
4, 5	TS1, TS0	Time-Select Pins. TS1 and TS0 set the temperature scale factor by connecting TS1 and TS0 to either V$_{DD}$ or GND. See Tables 1 and 2.
6	OUT	Square-Wave Output with a Clock Period Proportional to Absolute Temperature (°K) (MAX6576)
		Square-Wave Output with a Clock Frequency Proportional to Absolute Temperature (°K) (MAX6577)

Table 1. MAX6576 Time-Select Pin Configuration

TS1	TS0	SCALAR MULTIPLIER (µs/°K)
GND	GND	10
GND	V$_{DD}$	40
V$_{DD}$	GND	160
V$_{DD}$	V$_{DD}$	640

Note: The temperature, in °C, may be calculated as follows:

$$T(°C) = \frac{period(\mu s)}{scalar\ mulitplier(\mu s/°K)} - 273.15°K$$

Table 2. MAX6577 Time-Select Pin Configuration

TS1	TS0	SCALAR MULTIPLIER (Hz/°K)
GND	GND	4
GND	V$_{DD}$	1
V$_{DD}$	GND	1/4
V$_{DD}$	V$_{DD}$	1/16

Note: The temperature, in °C, may be calculated as follows:

$$T(°C) = \frac{frequency(Hz)}{scalar\ mulitplier(Hz/°K)} - 273.15°K$$

Detailed Description

The MAX6576/MAX6577 low-cost, low-current (140µA typ) temperature sensors are ideal for interfacing with microcontrollers (µCs) or microprocessors (µPs). The MAX6576 converts ambient temperature into a 50% duty-cycle square wave with a period proportional to absolute temperature. The MAX6577 converts ambient temperature into a 50% duty-cycle square wave with a frequency proportional to absolute temperature. Time-select pins (TS1, TS0) permit the internal temperature-controlled oscillator (TCO) to be scaled by four preset multipliers. The MAX6576/MAX6577 feature a single-wire interface to minimize the number of port pins necessary for interfacing with a µP.

MAX6576 Characteristics

The MAX6576 temperature sensor converts temperature to period. The output of the device is a free-running, 50% duty-cycle square wave with a period that is proportional to the absolute temperature (°K) of the device (Figure 1). The MAX6576 has a push/pull CMOS output with sharp edges. The speed of the output square wave can be selected by hard-wiring TS1 and TS0 as shown in Table 1. One of four scaled output periods can be selected using TS1 and TS0.

MAX6577 Characteristics

The MAX6577 temperature sensor converts temperature to frequency. The output of the device is a free-running, 50% duty-cycle square wave with a frequency that is proportional to the absolute temperature (°K) of the device (Figure 2). The MAX6577 has a push/pull CMOS output with sharp edges. The speed of the output square wave can be selected by hard-wiring TS1 and TS0 as shown in Table 2. One of four scaled output frequencies can be selected using TS1 and TS0.

Applications Information

Quick-Look Circuits

Figure 3 shows a quick-look application circuit for the MAX6576 using a universal counter measuring period. TS1 and TS0 are both tied to ground to select a scalar multiplier of 10µs/°K. The MAX6576 converts the ambient temperature into a square wave with a period that is 10 times the absolute temperature of the device in µs. At room temperature, the universal counter will display approximately 2980µs.

Figure 4 shows a quick-look application circuit for the MAX6577 using a universal counter measuring frequency. TS1 is tied to ground and TS0 is tied to V_{DD} to select a scalar multiplier of 1Hz/°K. The MAX6577 converts the ambient temperature into a square wave with a frequency that is equal to the absolute temperature of the device in Hertz. At room temperature, the universal counter will display approximately 298Hz.

Interfacing with a Microcontroller

Figure 5 shows the MAX6577 interfaced with an 8051 µC. In this example, TS1 is tied to ground and TS0 is tied to V_{DD} to select a scalar multiplier of 1Hz/°K. The MAX6577 converts the ambient temperature into a square wave with a frequency that is equal to the absolute temperature of the device in Hertz. The 8051 µC reads the frequency of the square-wave output of the MAX6577 into Timer 0 and displays the temperature as degrees Celsius in binary on Port 1. Listing 1 provides the code for this application. The interface is similar for the MAX6576, except the µC will perform a period measurement.

Noise Considerations

The accuracy of the MAX6576/MAX6577 is susceptible to noise generated both internally and externally. The effects of external noise can be minimized by placing a 0.1µF ceramic bypass capacitor close to the supply pin of the devices. Internal noise is inherent in the operation of the devices and is detailed in Table 3. Internal averaging minimizes the effect of this noise when using longer scalar timeout multipliers. The effects of this noise are included in the overall accuracy of the devices as specified in the *Electrical Characteristics*.
