General Description

The ZOOM-N-UMTS is supplied as standard with a global UMTS and quad band GSM/GPRS module. The 'ZOOM-N-UMTS' has been designed for simple integration into both new and existing designs and is intended to be a cost effective, fully tested alternative to a standalone bare module.

The ZOOM-N-UMTS can be integrated into your application to enable cellular communication quickly, with little effort and no formal testing required on your part until you go to production.

The ZOOM-N-UMTS provides a full set of interfaces through the 2 x 20 way IDE connectors. These headers are split into 2 categories, a function header and a communication header.

The function header includes access to the modules onboard GPIO connections and LED indicators and includes protection against over voltage.

The communication header provides access to all of the serial channels available on the module including USB / standard RS232 interface and the debug RS232 port. Both headers provide power connections and on/off controls.
