FIBER OPTIC RING LIGHT CONT.

Fiber Optic Ring Light, with its continuous ring, is the most popular light transmitter. The ring light housing encases high-quality glass fibers to provide 360° shadow-free illumination that makes viewing of inspection and assembly applications a snap. Its 36" length cable, made with interlocking stainless steel sheathing, enables the illuminator to be positioned outside the immediate work area to provide more space for inspection and assembly operations.
